Wat are the normal forms?

0, 1, 'or-and polynomials' (e.g. $p \cdot q + q \cdot r$)

Completeness (Herbrand):

Every tautology has 1 as normal form

14.3. A tautology checking

$$p \Rightarrow (q \Rightarrow p)$$

$$\rightarrow p(q \Rightarrow p) + p + 1$$

$$\rightarrow p(qp + q + 1) + p + 1 = p((qp + q) + 1) + p + 1$$

$$\rightarrow p(qp + q) + p1 + p + 1$$

$$\rightarrow pqp + pq + p1 + p + 1$$

$$\rightarrow pqp + pq + p + p + 1 = pqp + pq + (p + p) + 1$$

$$\rightarrow pqp + pq + 0 + 1 = pqp + (pq + 0) + 1$$

$$\rightarrow pqp + pq + 1 = (pp)q + pq + 1$$

$$\rightarrow pq + pq + 1 = (pq + pq) + 1$$

$$\rightarrow 0 + 1 = 1 + 0$$

$$\rightarrow 1$$

'So' it works ...

15. Functional Programming

What are the objects?

Expressions

e.g. arithmetic expression

but 'user-defined' in general

What are the rules?

e.g. rules of arithmetic

but 'your program' in general

Slogan: declarative programming = user-defined computation

declarative: what not how: e.g. prolog and haskell

15.1. Sieve of Eratosthenes

Rules:

$$\text{filter}(x : y, 0, m) \rightarrow 0 : \text{filter}(y, m, m)$$

$$\text{filter}(x : y, s(n), m) \rightarrow x : \text{filter}(y, n, m)$$

$$\text{sieve}(0 : y) \rightarrow \text{sieve}(y)$$

$$\text{sieve}(s(n) : y) \rightarrow s(n) : \text{sieve}(\text{filter}(y, n, n))$$

$$\text{nats}(n) \rightarrow n : \text{nats}(s(n))$$

$$\text{primes} \rightarrow \text{sieve}(\text{nats}(s(s(0))))$$

16. Bowls and Beans

What are the objects?

Situations: distributions of finite numbers of beans over an (two sided) infinite array of bowls

What are the rules?

If a bowl contains at least two beans
move one bean to the bowl on its left and right

17. Snowflakes

18. Solution cola-gene

operators

t,a,g,c : unary

x : variable

axioms

$$t(c(a(t(x)))) = t(x);$$
$$g(a(g(x))) = a(g(x));$$
$$c(t(c(x))) = t(c(x));$$
$$a(g(t(a(x)))) = a(x);$$
$$t(a(t(x))) = c(t(x));$$

Result:

$$\{ [3] t(a(t(x))) \rightarrow t(x),$$
